• Google VRP #1577 • HackerOne ashfiexe • HackenProof ashfiexe
• Intigriti ashfiexe • LeetCode ashfiexe • GitHub AsHfIEXE

$ SUMMARY

Security researcher, developer, and published science-fiction author with experience in vulnerability discovery, bug bounty hunting, security tooling, and open-source development. Recognized by Google and Vercel for responsible vulnerability disclosure and active across Web2 and Web3 security programs. Combines offensive security expertise, software engineering, and strong technical communication to develop security-focused solutions, conduct impactful research, and produce high-quality technical and creative work.

// CYBERSECURITY & SECURITY ENG

Web App Sec (OWASP) | Vuln Discovery & Analysis | API Security | Recon & Attack Surface | Risk Assessment | Scan Automation

// WEB3 & BLOCKCHAIN

Smart Contract Audits | DeFi Protocol Sec | Access Control | Flash Loans | EVM Internals

// DEVELOPMENT

Python / Flask | REST API Design | System Architecture | Firebase | CLI Tools | AI/ML Integration

// WRITING

Sci-Fi Thriller | World Building | Character Dev | Narrative Design | Non-Fiction

// ANALYTICAL & PROBLEM-SOLVING

System-Level Thinking | Debugging Complex Systems | Performance Optimization | Reverse Engineering | Research-Driven Dev

$ SECURITY ACHIEVEMENTS

Google Vulnerability Reward Program GOOGLE VRP ACCEPTED

- Achieved **4th Accepted Vulnerability** by Google's VRP for impactful security discoveries
- Ranked **#1577 Globally** on the Google Bug Hunters Leaderboard
- Submitted 120+ vulnerability reports across Google VRP, HackerOne, Intigriti, and HackenProof
- Successful findings in: Web Applications, Blockchain Protocols, Smart Contracts, and Web3 Assets

"Persistence matters in security research. Every report — accepted, rejected, or marked 'Won't Fix' — was part of the learning process." — Salehin Ashfi

$ FEATURED PROJECTS

CyberSage 2.0 | *Full-Stack Security Assessment Suite*

Python / React / Flask / WebSockets / Docker

- Architected a comprehensive pentesting tool with a real-time React dashboard orchestrating multi-phase vulnerability scans via WebSockets
- Integrated Nmap, Nuclei, and an AI-powered analyzer (OpenRouter) to detect complex attack chains and automate reporting
- Containerized the entire application (Docker Compose) for one-click deployment, isolating scanning environments and streamlining setup

SentinelCore | *Distributed IoT Security Platform*

Python / FastAPI / React / ESP32 / MQTT

- Engineered a privacy-first, modular network security system on a Raspberry Pi hub with three ESP32 nodes communicating via MQTT
- Implemented ML-driven anomaly detection and device fingerprinting to identify rogue network devices and port scans in real-time

$ FEATURED PROJECTS

SQLVulnInjector | *Interactive Security Education Lab*

PHP / SQLite / JavaScript

> Built a zero-configuration PHP lab that auto-generates a live SQLite database, allowing users to safely execute authentic SQL injection payloads

> Designed 6 progressive attack scenarios (Error-based, UNION, Blind/Time-based, Second-order) and a CTF mode to gamify learning

Cyphisher | *Automated Phishing Simulation Framework*

Bash / PHP / Docker

> Developed a red team tool to simulate social engineering attacks, featuring 30+ premium templates and a terminal UI with dynamic loading

> Automated tunneling engines (Cloudflare, LocalXpose) and implemented intelligent error recovery with dynamic port allocation and zombie process elimination

$ OPEN SOURCE

> **Maintainer & Creator:** Lead development on CyberSage, Cyphisher, SQLVulnInjector, and other security-focused open-source projects

> **Security Education:** Published security tooling and interactive educational resources used globally by researchers, students, and ethical hackers

> **Ecosystem Contributor:** Active contributor to open-source ecosystems related to cybersecurity, Python tooling, and software engineering

$ WORLDS I'VE BUILT / AUTHORED WORKS

Author of **5+ self-published books**, specializing in mind-bending Sci-Fi thrillers that explore technology, time, and consciousness.

SHADOW BEHIND THE ETERNITY | *Philosophical Sci-Fi Thriller*

What happens when death is no longer the end? A mind-bending dive into digital consciousness and the afterlife — where the line between dying and downloading blurs into something terrifyingly beautiful.

CHRONOGENESIS THE SHATTERED FUTURE | *Sci-Fi Thriller · Series Book 1*

Time has become a weapon. Lila Reeves — a barista haunted by her parents' mysterious disappearance — starts experiencing temporal distortions that shatter the boundary between reality and nightmare. The clock is running out. On everything.

CHRONOGENESIS Echoes of the Architect | *Sci-Fi Thriller · Series Book 2*

The war for time isn't over. In the aftermath of Lila's ultimate sacrifice, fractured timelines spiral toward collapse — and the Architect's shadow grows longer. The sequel that hits harder than the first.

$ EDUCATION

High School Student Expected Graduation: 2026

Relevant Coursework: Computer Science, Information & Communication Technology
Primary Focus: Cybersecurity, Advanced Programming, and Web Architecture

$ CERTIFICATIONS

BDSec CTF 2026

PARTICIPANT VERIFIED

International Capture The Flag Competition · Team ashfiexe

- > Participated in BDSec CTF 2026, an international Capture The Flag competition, as part of Team ashfiexe
- > Final team standing: **342** of **545** competing teams
- > Event held 20 July 2026, certified by Knight Squad

```
